

# QUOD ERAT DEMONSTRANDUM.

Our CRO offers high-quality full service which is tailor-made according to your study.

Our clinical research focuses on...

- ... the patient's suffering, needs and hopes for healing, which can be achieved more frequently with new scientific findings.
- ... the company which is cooperating with us, transferring the responsibility for the success of the study to us and taking each step together with us to further develop the company.
- ... science, which constantly develops on the basis of clinical studies, challenges us anew each day and where we can contribute a little to its development.

Let's research together!

The Clinical Research Organisation was founded in 2008 and initially focused on the data management of clinical studies. Since then, our services portfolio has continuously been increased, whereby in the meantime more than 1000 studies could be completed successfully. Our team consists of a medical specialist for internal medicine / cardiology as well as scientists with many years of experience.

We look forward to new challenges!
