

# Endocrinology

- Correlation of different antibodies with the grade of malignancy in neuroendocrine tumors of the gastrointestinal tract
- Apoptosis of euthyroid thyroid gland tissue: influence of implemented substances and solvents on cell growth
- Risk factors for the occurrence of autoimmune thyroiditis in patients with vegetarian or vegan nutrition – which role does the iodine/selenium quotient play?
- In vitro study: apoptosis under various trial conditions
- Modifications of renin and haemodynamic parameters in patients with primary hyperparathyroidism
- Influence of hyperparathyroidism on hepatic and renal function
- Success rates of different surgery methods in hyperparathyroidism
- Risk factors for the development of recurring goiter and its therapy
- Recurrences and mortality after surgical treatment of thyroid Tumors
- Risk factors for recurrence paresis after thyroid surgery – a multicenter study
- Post-operative haemorrhages, wound infections and recurrence paresis after strumectomies in struma multinodosa
- Influence of age on recurrent paresis after strumectomy
- Outcome in patients with metastasising neuroendocrine tumors under different therapy procedures
- Sensitivity and specificity of different diagnostics for the differentiation of diagnoses and differentiation of neuroendocrine tumours
