

# Otorhinolaryngology

- Case series with a new nasal spray: first results in clinical practise
- Comparison of 2 divergent types of nasal sprays – differences in effects and side effects – analysis by means of a cross-over-design
- Impaired nasal breathing due to swollen mucosae and treatment success due to acupuncture
- Comparison of expression of angiogenesis factors in the glandula parotis, glandulae submandibularis and sublingualis
- Comparison of results of different surgical strategies in the papilloma inverted of the nose
- Prognosis after brachytherapy in sinonasal tumour diseases
- Comparison of different aerosoles for the treatment of chronic rhinosinusitis
- Effects of anticoagulation on the incidence of Epistaxis
- Association between cardiovascular risk factors and the carotis intima thickness on epistaxis
- Risk factors for the development of leucoplacia and squamous cell carcinoma of the paranasal sinuses
- Carcinoma of paranasal sinuses – risk factors, treatment and mortality
- Prognostic relevance of different antigens in the larynx carcinoma
- Comparison of surgical therapies of the papilloma inverted of the nose and paranasal sinuses
- 5-year-survival of patients suffering from inoperable squamous cell carcinomas in the head-neck area after the carrying out of a hyperfractionated-accelerated radiotherapy
- Prognostic importance of new markers in malign tumours of the oral cavity and the larynx – of what significance is the flow cytometry?
- Long-term survival after larynx resection – influence of VEGF on clinical course and prognosis
- Influence of the HPV in the development of squamous cell carcinomas
- Vocal folds surfaces in polypuses, Reineke oedema, papilloma and other benign diseases
- Typecast of unclear lymphadenopathies in ENT physicians' practice
- Case series: Establishing a new hearing aid – which successes can be achieved due to adjustment on both sides?
- Hearing ability before and after surgical reconstruction with tympanoplasty, I, II – V and stapes surgery
- Comparison of hearing ability after use of different cochlear implants
- Influence of different rehabilitation programmes on the hearing ability after cochlear implants
- Audiogram and speech comprehension of adolescent patients after cochlear implant implantation
- Cochlear implants in adults who lose their hearing prelingually
- Hearing defects in the Churg-Strauss syndrome
- Effects of noise annoyance during operations on the operating surgeon
- Triggering of nystagmus due to physiological stimuli in healthy test people – which influence causes the strongest nystagmus?
- Nystagmus caused by different triggers and their treatment
- Effects of tongue piercings on articulation
