

Paediatrics

- Long-term course of SDS and BMI in adipose adolescents with vs. without fat-modified nutrition
- Tracing of catch-up growth for 'small for gestational age (SGA)' children
- Influencing factors of catch-up growth for 'small for gestational age (SGA)' children
- Influence of severity of the adrenogenital syndrome on size and weight at birth
- Phenotyping of the Ullrich-Turner syndrome
- Psycho-social influences of traumatic births on the child's development
- Analysis of epidemiologic factors as well as educational background of parents on the development of language disorders in children and adolescents at different age-levels
- Emergencies in newborns – information level of doctors and nurses before and after trainings
- Foreign body aspiration in infants and toddlers
- Comparison of the concentration of free radicals in the serum in infants with vs. without complicated birth
- Phenols in serum, urine and body fluid in healthy and ill premature babies
- Improvement of quality of life by introducing different hygiene schemes for children suffering from mucoviscidosis
- Information level of doctors and midwives regarding nutrition of infants and toddlers
- Case-series of children with craniosynostosis
- Evaluation of plagiocephaly – a prospective study featuring a method comparison
- Klinische Verläufe nach Hüftgelenksrekonstruktion bei Kindern mit spastischer Cerebralparese
- Epilepsia in toddlers – risk factors, diagnostics and prognostic factors
- Treatment of renal reflux and renal insufficiency after urinary tract infection in children
- Improvement of overall fitness and quality of life as well as weight reduction in individual training vs. standard training
- Coherence between colour visual field and cognitive abilities in children at primary school age
- Prevalence of speech development disorders at different age levels – a cohort study
- Die Anwendung des Akkusativs als Marker der kognitiven Entwicklung bei Schulkindern
- Alcohol intoxication in adolescents: Risk factors, outcome and predictors for alcohol addiction
- Risk factors for hepatocellular carcinomas in children
- Prognostic relevance of different inflammatory markers in septic children suffering from leukaemia
- Quality of life in juvenile idiopathic arthritis – comparison of different scores (PedACR, the DAS28 and the JADAS) and definition of a gold standard
- Influence of the time of operation in acute appendicitis in toddlers – can an early operation improve the outcome?
- Disease management in children suffering from oncological diseases
